Hello David,

I am attaching two files with respect to correlation between the import of the three items of soap, toothpaste, and shampoo with the total volume of imports in Iran. The dataset is converted to the SPSS and processed by the software. I want you to verify the result.

You have mentioned that you would like to have access to SPSS. I have contacted my department manager to see the possibility of doing this.

If Jon also needs a copy to use, I can purchase one for him as well.

Regards,

Safavi
